

Fire Alarm/Security

Properly functioning fire alarms and security systems are a critical for personnel safety. Yet those systems are built around integrated circuits (IC's) which are highly susceptible to transient damage. If an IC fails the facility could be without fire or security alarms. Building alarm circuits (whether fire or security) are tied to both the power system and the communications systems. Because of their attachment to more than a single line that goes through the wall of the facility alarm circuits are even more likely to experience damaging surges that other electronic equipment. Every effort needs to be made to insure that each location where a wire transitions from the inside of the building to the outside of the building has a surge protection device installed. Facility and equipment managers that want to be certain that they have properly functioning alarm systems should call their local Total Protection Solutions distributor today to get help in improving the reliability those systems and in cutting their facility operating expenses.

LowProfile™

ANSI/IEEE C62.41 Category A & B

Ideal for Sub-Panel and Critical Load Applications. Low Profile products maximize correct installation and offer performance advantages with in-wall flush mount capability. The best choice for sub-panel and critical load applications with the best enhanced transient filter (ETF) in the industry.

SurgeTrack™

ANSI/IEEE C62.41 Categories A, B, & C

Ideal for main service entrance, distribution panel and branch panel applications. SurgeTrack products are the choice for main service, distribution panel, and branch panel applications. Compact design offers easy installation. The optional enhanced transient filter will extend your equipment life and reliability.

LoadTrack™

ANSI/IEEE C62.41 Categories A, B, & C

Ideal for critical dedicated load applications. LoadTrack products are the choice for critical dedicated control loads, such as PLCs, fire alarm panels, CNC control systems, OEM and systems integration controls and other microprocessor-based loads.

ComTrack™

Surge Protective Devices for data and communications applications.

ComTrack products are the most reliable surge protective devices for data and communication applications. Provides quality protection for telephone lines, data/signal lines and coaxial lines. 10-Year Free Replacement Warranty
